

The LTW 42 wind turbine was developed specifically to safeguard the environment, aiming for decentralised production of low-cost renewable energy and its direct consumption right where it is ...

Important mechanical features of this robust, stall-controlled wind turbine with a rotor diameter of 29m and a rated output of 250kW are maintained. Thus, the WTN250i continues to be designed for class ...

The WES250 is a two bladed, high performance, reliable midsize 250kW wind turbine with a rotor diameter of 30 meters. The mechanical part of the WES250 is based on the original, proven design ...

It's designed for optimum performance from the lowest of windspeeds to surviving gales and is an effective and efficient way to deliver energy into batteries on sailing yachts, ready to use the power ...

The LTW42 is LEITWIND's most compact wind turbine, ideal for decentralized renewable energy production. Low visual impact, maximum efficiency.

Join the Wind Aftermarket to buy and sell new, used and refurbished wind turbines, spare parts, and components. If you are a human seeing this field, please leave it empty.

We have power data on the 250 kW from the b.ventus in the system. You can see the powercurve in the diagram above. The b.ventus 250 kW has been listed since 04.05.2019.

Discover 250w wind generators with built-in controller & CE certification. Ideal for home and business use, these small wind turbines deliver reliable wind power.

A small wind turbine can also be a great addition to an off-grid system, to provide energy during those dark (but windy) winter days. With a build-in charge controller, the AIR 40 provides energy quietly ...

Get in-depth technical information and performance data for our 250 kW Wind Turbine. Download the full datasheet to explore power curves, efficiency ratings, and key technical details.
