

If the solar panels are the muscles of your system and the batteries are the heart, the charge controller is the brain. This article will walk you through what a solar charge controller does, why sizing it ...

This guide provides step-by-step calculations, sizing charts, and practical examples to help you select the perfect charge controller for your solar system, with special focus on MPPT (Maximum Power ...

This comprehensive guide will walk you through the exact calculations and considerations you need to select the perfect charge controller for your solar setup, whether you're building a small RV system or ...

Ensure your solar panels harvest every bit of energy with our MPPT and PWM solar charge controllers. Perfect for mobile, off-grid, and home use, they connect easily with other Victron components to build ...

Below is a table showing which size of charge controller you should get based on the power rating and the number of solar panels in your array. For example, if you have two solar panels ...

Whether you're powering an RV with 200W or building an off-grid cabin with 2000W, you'll learn how to match your controller to your panels and batteries for maximum efficiency and safety.

Since solar charge controllers are so important for a solar generator system, I put together multiple combinations of solar panels and solar arrays from 50W to 400W to calculate the ...

You are not oversizing the solar panels relative to the controller's limits here. Instead, you are buying a controller bigger than necessary to add flexibility, safety, and future-proofing to your ...

In this guide, we unpack solar charge controller types and sizing in plain English. We compare Maximum Power Point Tracking (MPPT) and Pulse Width Modulation (PWM) controllers, ...

You don't need a charge controller with small 1 to 5 watt panels that you might use to charge a mobile device or to power a single light. If a panel puts out 2 watts or less for each 50 battery amp-hours, ...
