

"In 2025, China's deployments of new energy storage reached 66.43GW/189.48GWh, with power and energy capacity increasing by 52% and 73% year-on-year respectively," disclosed ...

China's new energy storage capacity surged 85% to 144.7GW in 2025, led by lithium-ion batteries. Independent storage projects now dominate, with top regions identified and growth ...

China's cumulative power-sector energy storage capacity reached 213.3 GW by the end of 2025, up 54% year on year, according to data from the China Energy Storage Alliance (CNESA)...

By the end of the first half of 2025, China's new-type energy storage had maintained a stable and rapid growth trajectory. The total installed capacity reached 94.91 GW / 222 GWh, ...

In February 2025, China shelved a requirement that new domestic wind and solar projects be bundled with energy storage. The change meant that China's storage providers could no longer ...

China has raced ahead of its energy storage targets in the past. It initially set its new energy storage target for 2025 at 30 GW but reached that milestone two years early.

China's new energy storage sector continued its strong growth in H1 2025, with installed capacity reaching 94.91 GW and 222 million kWh, up about 29% from the end of 2024.

The China New Energy Storage Development Report 2025 represents a major milestone in the institutionalization of NES planning and governance in China. By quantifying progress and ...

China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure ...

The cumulative installed capacity of new energy storage in China is expected to exceed 100 gigawatts (GW) by 2025, according to the Energy Storage Industry Research White Paper 2025 ...
