

What is a demand response?

The demand response (DR) is a type of mechanism that guides power users to reduce or shift the power load in a certain period through price signals or incentive means to respond to power supply, ensure grid stability, and restrain the rise in electricity prices (Siano, 2014).

What is Demand Response (DR)?

The concept of demand response (DR) has been around since the advent of electric power grids. Some of the first power systems used time-of-use (TOU) pricing.
