

Altair offers a comprehensive suite of solutions to support the development of efficient and sustainable battery cells, from the microstructure of the raw electrode material to the battery cell life cycle.

Full battery development support up to series, covering all sample phases, prototype build up and testing

NXP offers a comprehensive suite of software solutions for battery management systems (BMS), including production-grade device drivers, safety libraries (SL), application examples, real-time drivers and development ...

Batterystats is a tool included in the Android framework that collects battery data on your device. You can use adb to dump the collected battery data to your development machine and create a report you ...

View the TI BQ-BATTERY-PROGRAMMER-SW Software development kit (SDK) downloads, description, features and supporting documentation and start designing.

Breath's simulation and embedded software products span the full battery development lifecycle, transforming batteries from passive components into intelligent systems that deliver superior real ...

Ansys offers an integrated solution for battery management system (BMS) design and development that allows for risk-free virtual testing.

Their solution provides the building blocks to create revenue optimization models for battery assets, which can be used in siting, design, and commercial off-take decisions in development and to ...

What tools are essential for Firmware Development for Battery Life Extension? Essential tools include embedded development environments, power profiling devices, simulation software, and battery ...

Microsoft Power Platform provides various tools for developers to extend platform features and capabilities using code.
