

Distributed energy systems are transforming the electricity landscape in Latin America and the Caribbean, shifting power from centralized utilities to individual consumers who now generate their ...

Solar power stands out with a CAGR of 13.9% between 2019 and 2024, reaching 12 GW by end-2024, driven by distributed generation and large-scale PV projects such as the Sonora Solar Park.

Virtually all of these installations use solar panels. Distributed energy has thus become a major driver of Latin America's energy transition, along with large, utility-scale solar and wind farms.

This research aims to highlight a summary of different aspects of connecting photovoltaic systems to the grid in eight countries in South America with similar socioeconomic development.

This report is an updated and segmented version of our previous South America solar PV outlooks, offering clients a deeper understanding of the factors influencing solar development in the ...

Crystalline silicon solar panels remain the dominant choice in the South America Solar Photovoltaic Industry. Their efficiency and reliability make them the preferred option for commercial ...

The South America Solar Photovoltaic Market is growing at a CAGR of greater than 11% over the next 5 years. Enel Green Power S.p.A., Trina Solar Limited, Atlas Renewable Energy, ...

In its latest report on the South American solar PV market, Wood Mackenzie has revealed that the region will add 160 GW of photovoltaic (DC) capacity between 2025 and 2034, driven by...

Aligned with global trends, the installed solar photovoltaic capacity in Latin America and the Caribbean has greatly increased in the last decade, surpassing 85 gigawatts in 2024.
