

GEM Energy is a self-performing EPC for community solar, commercial/industrial, and small scale utility solar.

Learn about our solar panels, inverters, and more, designed for efficiency and reliability.

Although there is fast growth in power storage capacity, China's grid heavily relies on coal power to mitigate the intermittency of renewables, casting a shadow on wind and solar's achievements.

Explore energy data on the map, browse and download data layers, generate dynamic reports on a variety of topics, or create a custom suitability model to identify areas for energy development. See ...

The Global Solar Power Tracker includes photovoltaic (PV) and solar thermal electricity generating projects. Solar projects for captive industry, including hydrogen production, are tracked.

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated distributed (<1 ...

To access additional data, including an interactive map of global solar farms, a downloadable dataset, and summary data, please visit the Global Solar Power Tracker on the Global Energy Monitor website.

It includes a large repository of mapping data that can be viewed or downloaded, and a modeling capability designed to identify areas that are suitable for low- or no-carbon power generation and ...

GEM data included 185 GW of solar and wind farms that were under construction as of December 2023 and designated to become operational before the end of 2024. Globally, only 59% of these projects ...

Five projects have been completed and are generating power, with four more expected to be operational by the end of 2025. An additional 567 MW of solar will be commissioned in 2027 in Central Macedonia.
