

The diameter of the multi-blade rotor varies from 2 m to 5 m. The multiblade turbine consists of curved sheet metal blades with inner and outer ends fixed with rims.

It is expected that the type of cooling influences the size of the windings, and hence the size of the machine. However, the effects of these influences on the mass and overall costs were not included.

Nacelle The nacelle is an enclosure that houses all of the generating components in a wind turbine, including the generator, gearbox, drive train, and brake assembly.
