

Greece's wind and solar complementary base station construction plan

Periods with very high wind solar and small hydro penetration (max 92%) received smoothly by the electricity grid throughout the year. The positive effect from wind energy on reducing extreme prices ...

The second half of 2025 will be decisive. Key developments to watch include the first tenders under the standalone storage regime, the adoption of Greece's inaugural hydrogen law, and ...

Greece has reduced the 2030 installed capacity targets for its solar photovoltaic (PV) and offshore wind plants in a new revised version of its draft national energy and climate plan (NECP), while it raised its ...

In fact, Greece's largest industrial power consumer - the Aluminium of Greece smelter - has announced plans to cover 100% of its electricity needs with renewables by 2030, as part of a ...

Greece's renewable energy sector is experiencing a rapid development. In the last five years, the share of renewables in the country's electricity mix grew by more than 15 percentage...

Discover how Greece is rapidly expanding its clean energy sector with significant investments in solar and wind farms to achieve ambitious sustainability goals.

The Greek government is positioning Greece as an eventual energy hub for the Balkan region and Europe. Greece will submit an updated energy and climate plan to the EU in June 2024 ...

Investment in advanced turbine technology, grid enhancements, and retrofitting of aging assets will be key to unlocking the full potential of Greece's wind resources.

Explore how Greece is decarbonizing its energy grid by combining solar with wind and hydro to meet demand for reliable and continuous power.

The Ministry of Environment and Energy of Greece has released its revised National Energy and Climate Plan (NECP), which includes more ambitious wind and solar targets to cut ...
