What is a typical lithium ion battery size?

Typical lithium ion battery cell sizes--18650, 21700, and 26650--are named by their dimensions (e.g., 18 mm \times 65 mm) and range in capacity from ~1,300 mAh up to 6,800 mAh. Compared to nickel metal hydride and other traditional chemistries, lithium-ion cells typically have a very low self-discharge rate.

How many digits are in a lithium ion battery?

Cylindrical lithium-ion batteries are typically represented by five digits; the first two digits refer to cell diameter, the third and fourth digits indicate physical length, and the fifth digit indicates shape. Choosing the right lithium battery size, such as ups batteries, is essential for device performance, runtime, and power output.
