

Lithuanian electricity transmission system operator Litgrid manages electricity flows in Lithuania and maintains stable operation of the national electricity system

Lithuania imports 70% of its electrical power, since 2022, mostly from Sweden. In 2015, transmission lines connected Lithuania to Sweden (700MW) and Poland (500MW). Construction of 200 MW / 200 MWh grid batteries started in 2022, to increase grid stability. Following the Russian invasion of Ukraine, Lithuania halted all import of Russian electricity in May 2022. On 8 February 2025 at 9:09 AM (UTC+2), Lithuania, together with Latvia and Estonia, have permanentl...

Lithuania has also taken steps to liberalize its electricity market and ensure a consumer's right to choose their electricity supplier and to purchase electricity for a real market price. Lithuania's regulated ...

In October 2025, Lithuania continued to make significant strides in its energy transition, focusing on expanding renewable generation, energy storage, and grid resilience.

"Litgrid is the electricity transmission system operator (TSO). It manages Lithuania's electricity transmission network and is responsible for its development. Its main function is to ensure the efficient and ...

Lithuania imports 70% of its electrical power, since 2022, mostly from Sweden. In 2015, transmission lines connected Lithuania to Sweden (700MW) and Poland (500MW).

Energy Cells Lithuania (an EPSO-G company), is deploying a 200 MW/200 MWh portfolio of energy storage projects to ensure effective active power reserve for reliable and stable operation of Lithuania's electricity ...

Litgrid AB is a Lithuanian electricity transmission system operator that operates Lithuania's electricity transmission grid. Litgrid is responsible for the integration of the Lithuanian electricity system into the ...

This report highlights key interim results from modeling Lithuania's near-term electricity grid through 2030. The study focuses on hourly operations of the future electricity grid.

Together with other Baltic states, Lithuania recently synchronised its electricity grid with the continental European system and disconnected from the Russian-controlled system, another key milestone.

The electricity sector is central to the energy transition in Lithuania, and the expansion of the electricity system is a focus area for this review. Both demand and supply are set to increase significantly, with large ...
