

Mexican energy storage power station peak regulation subsidies

Mayer Brown is well-placed to assist clients with projects in Mexico, as we have a deep understanding of these new regulatory changes and their impact. Below is a reference guide ...

The modalities of ESS associated with a power plant (intermittent), with an isolated supply scheme, and non-associated ESS, will receive the regulatory treatment of a power plant.

Investors and developers now face both challenges and new entry points -- particularly in strategic projects, self-supply, and energy storage, where clear legal structuring will be key to long-term success.

The regulations aim to implement a new framework for the electric power industry under principles of governing strategic areas, strategic enterprises and organic simplification, following the ...

By combining specific regulations, a storage mandate for new renewable projects, and long-term planning, Mexico is emerging - according to OLADE - as a regional benchmark for energy ...

Executive takeaway: Storage is now a regulated business line, not an accessory. That unlocks bankability - but only if you treat compliance like you would for a new power plant.

By implementing a combination of measures, including subsidies for local production, tariff exemptions for key equipment imports, and tax incentives for technology transfers, Mexico plans to ...

Now, the LSE replaces this practice and grants a preferential right to the supply by CFE, forcing at least 54% (fifty-four percent) of its energy to be injected into the National Electric System each year, ...

This reflects a significant commitment to strengthening Mexico's energy infrastructure, aimed at improving the stability and efficiency of the national electricity system, where battery ...

Storage systems are not eligible to receive clean energy certificates (CELs) and are not obligated to acquire them. CELs are certificates issued to generators of clean energy that large ...
