

Renewable energy, usable energy derived from replenishable sources such as the Sun (solar energy), wind (wind power), rivers (hydroelectric power), hot springs (geothermal energy), ...

Solar technologies surpass other sources of renewable energy in terms of their capacity to deliver benefits across different end-use applications and geographical locations and to mitigate...

Modern renewable electricity generation by source, World Measured in terawatt-hours.

Clean energy continues to dominate new power capacity. For example, in 2024, more than 90% of all new electricity capacity worldwide came from renewable sources such as solar, wind, ...

Discover the best renewable energy source for your needs. Compare solar, wind, hydro & more with 2025 data, costs, and expert analysis.

Power-sector renewables remain the fastest-growing source of energy worldwide. Hydro remains by far the largest source of renewable power globally meeting 16% of global electricity demand, followed by ...

Renewable & alternative fuels products Interactive data tools Renewables products and data Renewable Electricity Infrastructure and Resources Dashboard Maps and charts of biomass, geothermal, ...

We've taken a look at some of the top renewable energy sources -- solar and wind among them -- examining the pros, cons and some of the companies using them

Renewable energy is the fastest-growing energy source globally and in the United States. Globally: o About 13.5 percent of the energy consumed for heating, power, and transportation came from ...

From the ubiquitous solar radiation harnessed by photovoltaic panels to the powerful winds driving turbines, and the immense potential of geothermal heat from the Earth's core, the ...
