

Surplus electricity from RE generation as well as cheaper electricity imports from the Southern African Power Pool (SAPP) can be stored in the BESS. The stored energy could supply customers during ...

Namibia is not yet self-sufficient, but the combination of grid-scale storage and transmission expansion is laying the foundation for a more resilient and renewable-driven power ...

Key contracts have been signed for the first-ever grid-scale battery storage project in Namibia, signifying the African country's dedication to modernising its energy infrastructure, ...

The project features a 45 MW / 90 MWh BESS facility, representing the country's largest battery, and is part of the broader Transmission Expansion and Energy Storage (TEES) program. ...

Today marks the approval of Namibia's first ever World Bank financed energy project, aimed at improving the reliability of the country's transmission network and enabling increased integration of ...

Let's cut to the chase: In December 2023, Windhoek made history by launching Namibia's first grid-scale energy storage system. This 54MWh project in Erongo Region isn't just a ...

As a viable option to replace fossil fuel fired power stations, NamPower, Namibia's national power utility, will invest in CSP with thermal storage to combine operational flexibility with high capacity value that ...

As southern Africa's first mover in grid-scale storage, Namibia's not just solving its own energy puzzle. They're creating a replicable model for the continent's \$12B storage market - and honestly, that's the ...

One of the most important inputs for economic growth is an abundance of reliable, affordable energy and Namibia is increasingly coming under pressure to deliver a power supply that ...
