

Are Chinese electric cars coming to Europe?

The rise of Chinese electric cars in Europe is far from over. Car sector association BOVAG reported, based on a study by consultancy agency KPMG, that the market value of Chinese electric cars will be 10 percent by 2030. This is a significant increase compared to 2023, when it was just four percent of the total European car market.

Will electric cars be sold in the Netherlands by 2030?

They also, albeit through joint ventures, have plans to move a number of their assembly lines to Europe," BOVAG wrote. The expectation is that just under 19 percent of the electric cars sold in the Netherlands by 2030 will be owned by a Chinese brand. Three years ago, the expectation was this would amount to eight percent of the total sold cars.

Are electric vehicles a reliable transport option in the Netherlands?

As the share of electric vehicles in the Dutch car fleet increases, the Netherlands also invested in the expansion of its charging network, which increases confidence among drivers that electric vehicles are reliable transport.

Which EV technology has the highest growth in Europe?

But in the EU, the highest growth is in BEVs. In China, BEVs still lead in market share among new energy vehicles (NEVs)--an umbrella term for vehicles with some form of electric power--but alternative EV technologies that provide greater range, including PHEVs and EREVs, are gaining in popularity.
