

The Ocean Battery is a scalable, modular solution for utility scale energy storage that is produced by renewable sources such as wind turbines and floating solar farms at sea. Ocean Battery is a pumped ...

Develops innovative solutions for offshore renewable energy sector, integrating various sources with onsite storage technology to improve efficiency and energy yield of offshore wind farms. "Founded in ...

Ocean Grazer develops innovative solutions for the offshore renewable energy sector. Our innovations integrate multiple renewable sources together with onsite storage technology to improve the ...

Ocean Grazer is a spin-off from the University of Groningen. Back in 2013, Wout Prins embarked on a scientific journey focused on the generation of offshore renewables: wave energy.

Dutch clean technology start-up Ocean Grazer has developed a unique energy storage system as a perfect fit for large-scale offshore renewable energy generation.

Ocean Grazer develops hybrid solutions for the offshore renewable energy sector. It is an energy storage system that functions like a hydroelectric dam at the bottom of the sea.

The Ocean Grazer is a conceptual energy collection platform, projected to house several renewable energy generation modules, including wave energy, solar energy and wind energy.

Dutch clean technology start-up Ocean Grazer has completed the first live test phase of its Ocean Battery energy storage system, deemed as a "missing link" in the global energy transition ...

Ocean Grazer develops innovative solutions for the offshore renewable energy sector. Our innovations integrate multiple renewable sources together with onsite storage technology to improve the...

The Ocean Grazer Project by the University of Groningen comprises research and education activities on offshore renewable energy (ORE) focusing mainly on dense wave energy converter (WEC) arrays ...
