

NLR's material scientists perform testing and research on future proofing PV systems, providing greater understanding of grid reliability and system performance, the impacts of extreme ...

The Major Solar Projects List is a database of all ground-mounted solar projects, 1 MW and above, that are either operating, under construction or under development.

It includes corresponding PV facility information, including panel type, site type, and initial year of operation.

The U.S. Department of Energy Solar Energy Technologies Office (SETO) supports PV research and development projects that drive down the costs of solar-generated electricity by improving efficiency ...

Community solar is a great option if you're a renter, if your roof is unsuitable for solar panels, or if you're looking for an easy, low-commitment way to support solar and save on electric bills.

Our cutting-edge research focuses on boosting solar cell conversion efficiencies; lowering the cost of solar cells, modules, and systems; and improving the reliability of PV components and ...

Solar Installed System Cost Analysis NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ...

Berkeley Lab collects, cleans, and publishes project-level data on distributed* solar and distributed solar+storage systems in the United States. The data are compiled from a variety of sources, ...

Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop ...

NLR's solar energy research leverages our expertise--from materials to systems to commercialization--to continually improve the affordability, performance, and reliability of this ...
