

How solar energy is generated?

The PV technology convert visible spectrum to electricity and thermal collectors use both infrared and visible spectrum for energy generation. So the energy generation from solar radiation can be in the form of electrical energy or thermal Energy. The various conversion paths of solar energy is described in the Fig.2

Can solar energy produce electrical energy?

In terms of renewable energy,solar energy is the most promising direction for producing electrical energy. For the efficient use of solar energy it is necessary to understand how electrical energy is produced from the sun. This document de-scribes the principle of solar energy to generate electrical energy.

How to generate thermal energy from solar energy?

The generation of thermal energy from solar can be realized using various solar reflecting collectors. Most of the technology works on the principle of reflection,radiation and convection or based on the thermosiphon effect. Sun is a gigantic star,with diameter of 1.4 million kilometer releasing electromagnetic energy of about  $3.8 \times 10^{20}$  MW.

How does solar energy work?

As majority of our energy requirements are in the form of electricity,PV works on the principle of photovoltaic effect. The generation of thermal energy from solar can be realized using various solar reflecting collectors. Most of the technology works on the principle of reflection,radiation and convection or based on the thermosiphon effect.
