

Reduce utility costs, achieve energy independence and meet your sustainability goals by generating your own on-site power--and even selling surplus energy back to the grid.

Solar energy is the fastest growing and most affordable source of new electricity in America. As the cost of solar energy systems dropped significantly, more Americans and businesses ...

To access additional data, including an interactive map of global solar farms, a downloadable dataset, and summary data, please visit the Global Solar Power Tracker on the Global Energy Monitor website.

We report that the most common on-site renewable energy technology deployed to date by partners in the working group is solar PV panels. Despite its prevalence, there are still many challenges to ...

As the global push for sustainability grows, an increasing number of Fortune 500 companies are turning to on-site solar energy--not just to meet ESG goals, but to drive real business ...

This paper looks at the buildings that report onsite generation of renewable energy, including their type, location, and ENERGY STAR scores--as well as how they have changed over the past decade.

Onsite solar is an asset located where the renewable energy generated will also be consumed. There are three main types of onsite solar: rooftop, ground-mount, and carport.

Solar panels are becoming an increasingly common sight on rooftops and car ports as more landlords and owner-occupiers get on board with the idea of onsite renewable energy.

It involves the deployment of solar panels or photovoltaic (PV) modules on rooftops, parking lots, or other available spaces on the property. On-site solar installations can vary in size, from small ...

Over the course of seven sessions, more than 40 Better Climate Challenge partners from 10 different sectors learned about and shared valuable perspectives on solar photovoltaic technologies, other ...
