

Understanding Capacity Factor Calculating Power Generated by Your PV Array Measuring PV Array Performance Diagnosing PV Array Variances To find the expected production at your site, determine your solar resource and take into account any shading that may occur on the panels. The solar resource is measured in peak sun hours, which is the number of hours your installation achieves 1,000 watts per square meter per day. For instance, in many parts of California the solar resource is gr... See more on fluke .b_ans
