

What's cool about these plotlines is how they normalize the idea of solar power, making it accessible and relatable to viewers. Whether it's a drama, comedy, or sci-fi series, solar energy is becoming ...

From Alexandria's rooftop solar arrays to Woodbury's community-wide installations, the show demonstrates energy systems that mirror today's most promising distributed generation technologies.

Discover how Netflix and Disney are eliminating diesel generators from their productions and pioneering sustainable, zero-emissions mobile power for a greener entertainment industry.

Virgin River is one of a number of Netflix's productions replacing generators and fossil fuel-based transportation with greener alternatives. In Atlanta, Stranger Things is dabbling with...

The popular drama series, like other Netflix shows, is replacing diesel generators with massive battery-powered lights as part of the company's broader effort to cut emissions by half by 2030.

There are multiple reasons Netflix's drama series Ransom Canyon -- starring Josh Duhamel, Minka Kelly and James Brolin in the story of three rival ranching families in Texas Hill ...

Meta Description: Discover how TV series solar power generation is transforming entertainment. Explore real-world cases, cost-saving data, and why Hollywood's going green.

During the filming of "Ransom Canyon" starring Josh Duhamel and Minka Kelly, the production crew was able to power its basecamp and catering almost entirely by using the sun, Netflix said.

Filmed in New Mexico, the series became the first Netflix production to fully power its base camp by the sun for weeks on end. The production reduced its diesel generator fuel usage across all equipment by over 50% by using a mix of large mobile batteries, solar trailers, and solar battery systems.

With the goal of reducing the environmental impact of "Fallout's" desert set during its second season, the show's team piloted a generator-free basecamp to provide electricity.
