

Solar power supply for Spain's electricity system

Solar photovoltaic, which increased its electricity generation by 26.7%, was for the first time the technology that contributed the most GWh to Castile-La Mancha's generation structure, with a share ...

Spain lags behind other European states in grid spending relative to renewables investment, according to an analysis by BloombergNEF. Its solar capacity has more than doubled in ...

Spain's electricity mix includes 21% Wind, 20% Solar and 20% Gas. Low-carbon generation peaked in 2024.

Spain's solar PV capacity reached 6 GW in 2024, making it the country's top power source with a 25.1% share, surpassing wind at 24.9%. Renewable generation grew 10.3%, ...

In April 2025, a sharp power outage hit parts of southern and central Spain -- not during low supply, but at the exact moment solar output was peaking. The issue wasn't a lack of energy, but ...

This article explores how Spain's experience offers valuable lessons for other countries accelerating their shift to renewables. We examine the policies that propelled Spain forward, the root ...

At some times in spring, as much as 60 per cent of Spain's electricity comes from the sun. That has enabled Spain to slash its use of gas and coal-fired power stations.

The grid operators needed more than a day to fully restore the power supply in Spain and Portugal. One of the circulating theories is that excessive solar power caused the blackout.

Wind and solar now account for more than 40% of the total electricity supply. In a land of abundant sunshine, the share of solar is set to rise further. Not only has Spain become a world...

Renewable generation increased by almost 11% in a record-breaking year on two fronts: achieving the highest renewable electricity generation ever recorded and capturing its largest share ...
