

This has encouraged the integration of energy storage devices onboard trains as the only possible solution to replace diesel engines and operate on catenaryless and nonelectrified routes.

To this end, the demonstrator train, a Renfe's Civia commuter unit, has run on the Zaragoza-Canfranc line both in electric mode, in the electrified area, and in hybrid mode, combining energy from ...

The European Commission has approved a new aid scheme that will allow Spain to deploy large-scale electricity storage, both in hybridisation with renewable energy facilities and stand ...

Spain's Talgo is set to build the first-ever high-speed hydrail trains, named Europe's most efficient high-speed rail network last November in a report by engineering consultancy, Ineco.

The adoption of onboard storage devices for light rail applications presents no technological barriers and is likely to continue its positive trend following the ever-increasing ...

The European Commission has approved a significant EUR700 million (approximately \$763 million) aid scheme to propel the deployment of large-scale energy storage across Spain, marking a ...

Spain, a leader in high-speed rail, drives sustainability with renewable energy sources like hydrogen and biofuels. Explore key advancements and challenges.

It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and thermal energy storage. The program supports hybrid ...

The wide array of available technologies provides a range of options to suit specific applications within the railway domain. This review thoroughly describes the operational mechanisms ...

The European Commission on Monday approved a new aid scheme for the deployment of large-scale electricity storage in Spain. Subsidies will be available for standalone energy storage ...
