

# Stockholm Power Plant Energy Storage Project

Stockholm Exergi is building one of the world's largest facilities for capture and permanent storage of biogenic carbon dioxide, scheduled for completion late in 2028.

The Beccs Stockholm project will create a world-class, full-scale Bio-Energy Carbon Capture and Storage (BECCS) facility at its existing heat and power biomass plant in Stockholm.

The BECCS facility will be built in the Energy Port near V&#228;rtaverket in Stockholm. When completed, it will capture and permanently store 800,000 tonnes of biogenic carbon dioxide (bioCO ...

Combining CO<sub>2</sub> capture with heat recovery in Europe's largest biomass-based Combined Heat and Power plant in Stockholm, we will capture and permanently store large quantities of biogenic CO<sub>2</sub>, ...

Stockholm Exergi is a Swedish energy company that runs a woody biomass-powered combined heat and power plant in Stockholm. They are planning to using a Bioenergy with Carbon Capture and ...

With operations planned to begin in 2028, Stockholm will become one of the first cities in the world to capture biogenic CO<sub>2</sub> on a large scale - up to 800 thousands tons per year.

Summary: Discover how Stockholm Power Plant is revolutionizing off-grid energy storage power generation with cutting-edge battery systems and hybrid renewable integration.

With the award by the Swedish government, the final investment decision (FID) for the BECCS project is expected to happen as soon as possible in 2025, initiating the construction of the ...
