

Three-phase Korean power cabinet used at border outpost

Does Korea have a power grid?

Unlike the European grids that provide a cross-border power transmission interface, Korea's power grid is completely isolated and lacks interconnection with that of neighboring countries, which gives a huge disadvantage.

Does Korea need a more stable grid system?

At the same time, the country needs to have a more stable grid system to deal with increased variability and reduction of system inertia. To lead this energy transition, Korea Electric Power Corporation (KEPCO) is mandated to build a specific blueprint envisaging the future of Korea's grid.

How can KEPCO make the most of the existing power grid?

KEPCO also has three technical solutions to make the most of the existing power grid. The first is to raise either transmission voltage or transmission capacity by replacing or reinforcing the existing power system to provide more power soon.

What will Korea's electricity consumption be in 2036?

The Korean government forecasts that the country's electricity consumption in 2036 would be 703TWh which is 1.7% average annual increase from that in 2021. With the growing demand, the country plans to expand renewable energy up to 30% which used to account for only 6.3% of the total national power generation in 2021.
