

We developed Klüberplex BEM 41-141, a single lubricating grease for the main, generator, yaw and rotor blade bearings, which outperformed all the other greases compared in standardised tests. This makes lubricant ...

That's why we offer special oils and greases made just for wind turbines. Our products help reduce breakdowns, make parts last longer, and cut down on maintenance. With smart tools to track oil condition and plan ...

The gearbox of a wind turbine relies on approximately 800 gallons of gear oil, while the transformer may utilize around 1200 gallons of oil. Proper lubrication plays a crucial role in ensuring the ...

Both grease and oil lubricants are used in wind-turbine systems; grease is the main lubricant in the pitch/yaw, generator, and shaft bearings, and formulated oil is in the gearbox.

In demanding settings such as wind turbines, specialized greases are developed to meet specific requirements. For example, SKF LGWM 1 is made for low-temperature applications, offering ...

Enhance wind turbine operations with the right industrial lubricants. Our guide on specially designed lubricants for wind turbine applications.

Wind turbine lubrication exists at the very extremes of industrial gear applications in terms of temperature, load weights, bearing wear, maintenance, accessibility and basic lubricant performance. Increasingly for offshore ...

There's a reason so many companies trust Mobil industrial lubricants to keep their wind turbines spinning. We deliver optimum equipment protection and oil performance in a wide range of conditions, including onshore, ...

In demanding settings such as wind turbines, specialized greases are developed to meet specific requirements. For example, SKF LGWM 1 is made for low-temperature applications, offering good ...

Wind turbines are complex machines, and understanding their maintenance needs is crucial for optimal performance. This guide dives deep into wind turbine oil, addressing a vital question: how much oil in ...

Paramount for wind turbines is fluid cleanliness. Filtration catches water, particulate contamination and any corrosion by-products that form despite good metal, elastomer and coating compatibility.
